

Application No: 08/876,008  
Filing Date: June 13, 1997  
Group Art Unit: 2776

In the claims

Please amend the claims as follows:

C1  
1. (Twice Amended) A method for providing a personal page on a computer system accessible to a plurality of remote users through a computer network, the remote users having profile information stored in the computer network and accessible to other remote users. comprising the steps of:

- a) accepting profile information from a plurality of remote users;
- b [a]) prompting a page-creating remote user with a plurality of page templates for the personal page and receiving a template selection from the remote user;
- c [b]) prompting the page-creating remote user to enter text to the personal page and receiving entered text from the remote user;
- d [c]) prompting the page-creating remote user to select or enter graphical information to display on the personal page and receiving the selection or entry from the remote user;
- e [d]) storing attributes representing each selection or entry made by the page-creating remote user in one or more databases;
- f [e]) providing the page-creating remote user with means to input security parameters for the personal page, the security parameters specifying authorization of at least one other remote user to access the personal page;
- g [f]) storing the security parameters in one or more databases; and
- h [g]) displaying the personal page upon request only to remote users who are authorized to access the personal page.

C2  
10. (Twice Amended) A method of providing a personal page on a computer system accessible to a plurality of remote users through a computer network [the Internet], each remote user having profile information stored on the system, comprising the steps of:

Application No: 08/876,008  
Filing Date: June 13, 1997  
Group Art Unit: 2776

- C2
- a) providing a page-creating user with a plurality of page templates for selection for the personal page;
  - b) providing the page-creating remote user with a means for contributing text to the personal page;
  - c) providing the page-creating remote user with a means for contributing graphics to the personal page;
  - d) providing the page-creating remote user with a means for accessing the profile information of other remote users for selecting other remote users to whom the page-creating remote user may wish to allow access to the personal page;
  - e [d]) providing the page-creating remote user with a means for entering security attributes authorizing at least one other remote user to view the personal page; and
  - f [e]) displaying the personal page only to authorized remote users.

C3

---

16. (Twice Amended) An apparatus for providing a personal page on a computer system accessible to a plurality of remote users through a computer network, each remote user having profile information stored on the system, comprising:

- a) means for storing profile information relating to each remote user;
- b [a]) means for providing a page-creating remote user with a plurality of pre-stored page templates for selection for the personal page;
- c [b]) means for the page-creating remote user to contribute text to the personal page;
- d [c]) means for the page-creating remote user to contribute graphics to the personal page;
- e) means for the page-creating remote user to access the profile information of other remote users for selecting other remote users to whom the page-creating remote user may wish to allow access to the personal page;
- f [d]) means for the page-creating remote user to enter security attributes authorizing at least one other remote user to view the personal page; and

C3

g [e]) means for displaying the personal page only to authorized remote users.

C4  
29. (Amended) In a networked computer system having a plurality of remote users, a [A] computer program product comprising computer useable medium having computer readable program code to:

- a) store profile information relating to each remote user, the profile information being accessible to other remote users of the system;
- b [a]) provide a page-creating remote user with means to create a personal page having personal information;
- c [b]) store attributes representing the personal information in the page-creating remote user's personal page in one or more databases;
- d [c]) provide the page-creating remote user with means to select other remote users [to allow those other remote users] to whom the page-creating remote user may wish to allow access to the personal page;
- e [d]) provide the page-creating remote user with means to input security parameters for the personal page, the security parameters specifying authorization of at least one other selected remote user to view the personal page; and
- f [e]) store the security parameters in one or more databases.

C5  
32. (Amended) In a networked computer system having a plurality of remote users, a system for providing a personal page comprising:

- a) means for storing profile information relating to each remote user, the profile information being accessible to other remote users of the system;
- b [a]) means for creating a personal page having personal information for a page-creating remote user;
- c [b]) means for storing attributes representing the personal information in the page-creating remote user's personal page in one or more databases;
